Effect of perfusion rate on the time course of insulin-mediated skeletal muscle glucose uptake
A. D. Baron, G. Brechtel-Hook, A. Johnson, J. Cronin, R. Leaming, and H. O. Steinberg

Disappearance of two major phosphatidylcholines from plasma is predominantly via LCAT and hepatic lipase
R. D. Shamburek, I. A. Zeich, P. S. Cooper, J. M. Vandenbroek, and C. C. Schwartz

Acute postprandial changes in leucine metabolism as assessed with an intrinsically labeled milk protein

Diurnal rhythms and effects of fasting and refeeding on rat adipose tissue lipoprotein lipase
M. Bergö, G. Olivecrona, and T. Olivecrona

Quantitative aspects of interorgan relationships among arginine and citrulline metabolism
Y.-M. Yu, J. F. Burke, R. G. Tompkins, R. Martin, and V. R. Young

Glycerol production and utilization in humans: sites and quantitation
B. R. Landau, J. Wahren, S. F. Previs, K. Ekbeg, V. Chandramouli, and H. Brunengraber

Contributions of liver and kidneys to glycerol production and utilization in the dog

LETTERS TO THE EDITOR

Glucose-6-phosphatase flux and the hepatic glucose balance model
R. Rognstad; L. Rossetti

RAPID COMMUNICATION

Altered muscle insulin sensitivity in the male offspring of protein-malnourished rats
S. E. Ozanne, C. L. Wang, N. Coleman, and G. D. Smith

CORRIGENDA

Volume 270, March 1996
Volume 33, March 1996

Pages E413–E418: Peter J. Reeds, Douglas G. Burrin, Farook Jahoor, Linda Wykes, Joseph Henry, and Elizabeth M. Frazer. “Enteral glutamate is almost completely metabolized in first pass by the gastrointestinal tract of infant pigs.” Page E418: an error was inadvertently made in the acknowledged attribution of financial support. The study was supported in part by the International Glutamate Technical Committee, not the International Dietary Glutamate Committee.
