Figure 4
Sato et al.

(A) Western blot analysis of p-Akt and Total-Akt levels in obese and lean mice treated with DHEA and subjected to exercise training. The p-Akt/Total Akt ratio is shown in the graph with bars indicating standard error. Asterisks denote statistically significant differences.

(B) Western blot analysis of p-PKCζ/λ levels in obese and lean mice treated with DHEA and subjected to exercise training. The phospho-PKCζ/λ level is shown in the graph with bars indicating standard error. Asterisks denote statistically significant differences.
